

# COMP1531

## 5.5 - Project Management - Tasks & MRs

# Task Boards

**Kanbans** are common ways to manage tasks.

- These boards allow tasks to be separated into individual items, their state to be tracked, and an assignee to be provided.
- They also allow for an easy visual representation.

You must be using a task management tool similar to this (e.g. the one provided on gitlab) for iteration 2 and 3.

# Merge Requests

Not enough people are merging in merge requests often enough. You will lose marks in iteration 2 for having too few merge requests.

Let's do an exercise together to figure out how many merge requests (minimum) could be part of iteration 2.
